

## Computing

We have a wide range of computing resources throughout the school. Every classroom has an interactive whiteboard and two networked computers all which have access to the internet. There are laptops available in lessons to encourage the use of the internet for research and word-processing skills.

By the use of floor robots, the children are taught the skills of programming and debugging. The children can learn to store and retrieve data using digital cameras and sound recording equipment.

Computing is used across the curriculum to support and enhance the teaching and learning. Protected access email and the internet are closely supervised and all websites accessed have been carefully selected and scrutinised by staff. All children are taught the importance of e-safety.
