

The children are inspired to learn about the world and its people. Learning involves exploring new and diverse places using equipment such as maps, globes and atlases. The children develop an understanding of their own land, exploring the UK and comparing it to other countries, saying what the similarities and differences are. Children will also explore seasonal changes and weather patterns.

At our school the children will be given opportunities to explore and discover facts about the world they live in. The activities and experiences we provide will help shape their attitudes and opinions of the world in the future.

They learn about people who lived long ago, making comparisons between now and then, and learn about important periods in History.
